

Portugal in focus: Aesthetic power generation & sun protection

Our customer „Solarpower Portugal“ has been installing our kits in Portugal for several years, mainly in the Algarve region. The aesthetic PV kits provide homeowners with their own electricity and also offer protection from the sun.

Everything from one source: bifacial modules, frames and statically tested anchoring!

Vertical elevation became economically interesting with the introduction of bifacial modules and is becoming increasingly popular. This is supported by the fact that PV fence systems do not consume land area and that an **interesting energy balance is achieved in combination with south-facing systems**.

This is clearly shown by the curve on the left. The green line shows the power production by south facing PV modules, the red line shows the power production by a PV Power Wall. Together, this results in a high yield over a long period of the day.

-> everything from a single source at an unbeatably low system price!

GridParity is the only company that offers suitable bifacial modules as well as a stable frame and various anchoring options. Detailed information in our new brochure (-> [click here to download](#)).

New premium module with high performance - ideal for roof systems

Our product range has so far been focused exclusively on double glass modules without frames. Due to their transparency, these allow the use in our kits. However, many of our customers are also interested in standard modules with frames, e.g. for equipping roof systems.

We have therefore included a particularly powerful module in our range.

It will be available in the power classes 360 and 365 Wp from end of May at a particularly favourable introductory price. Orders can be placed immediately at the prices shown in our price list.

SR-M60-HC (330-345 W)

Offer of the month: PV Terraces for special prices!*

Example picture, size and number of modules may vary depending on the model

Terrace LEA4 4 x M72 PV-Modules

Price on request

Total output: **1,3 kW**

Size (approx.):
2 x 2,4 x 4,1 m

incl. waterproof
module mounting

Example picture, size and number of modules may vary depending on the model

Terrace EVA3 6 x M60 PV-Modules

Price on request

Total output: **1,7 kW**

Size (approx.):
3,3 x 2,4 x 3,1 m

incl. waterproof
module mounting

Example picture, size and number of modules may vary depending on the model

Terrace MILA4 8 x M72 PV-Modules

Price on request

Total output: **2,6 kW**

Size (approx.):
4 x 2,4 x 4,1 m

incl. waterproof
module mounting

Example picture, size and number of modules may vary depending on the model

Terrace CARO4 12 x M60 PV-Modules

Price on request

Total output: **3,4 kW**

Size (approx.):
5 x 2,4 x 4,1 m

incl. waterproof
module mounting

> Other combinations are also available at reduced prices <

* This offer is valid for orders in the constellation listed here until **April 30, 2020**.
